Annual Interview with
Lieutenant General
Alfons Mais,
Chief of the German Army

*At the beginning of September, the Luftwaffe achieved Initial Operational Capability (IOC) for its IRIS-T SLM ground-based air defence system. It appeared in line with the completion of training of the first operating personnel. IRIS-T SLM allows for smooth integration into the current and future NATO air defence architecture – it is seen as an enabler of a true „Integrated Missile Defence Capability“ on the European continent.
